1 Common Stuff

1.1 Default code

```
#include <bits/stdc++.h>
#define _ ios_base::sync_with_stdio(0);cin.tie(0);
#define FOR(i,a,b) for (int i=(a);i<(b);i++)
#define SZ(x) ((int)(x).size())
using namespace std;
```

1.2 Priority Queue

```
// priority queue having minimum at top

#include <queue>,<functional>
priority_queue< T, vector<T>, greater<T> > pqueue;

// priority queue with custom comparing function
#include <queue>
struct cmp {
        bool operator ()(const int a, const int b) {
                return ((a)<(b));
        }
};
priority_queue<int, vector<int>, cmp> q;
```

2 Geometry

2.1 Convex hull

```
// Compute the 2D convex hull of a set of points using the monotone
     chain
// algorithm.  Eliminate redundant points from the hull if
     REMOVE_REDUNDANT is
// #defined.
//
// Running time: O(n log n)
//
//   INPUT:   a vector of input points, unordered.
//   OUTPUT:  a vector of points in the convex hull, counterclockwise,
     starting
//            with bottommost/leftmost point

#include <cstdio>

2.3 Java geometry

```
// In this example, we read an input file containing three lines, each
// containing an even number of doubles, separated by commas.  The
     first two
// lines represent the coordinates of two polygons, given in
     counterclockwise
// (or clockwise) order, which we will call "A" and "B".  The last line
// contains a list of points, p[1], p[2], ...
//
// Our goal is to determine:
//   (1) whether B - A is a single closed shape (as opposed to multiple
      shapes)
//   (2) the area of B - A
//   (3) whether each p[i] is in the interior of B - A
//
// INPUT:
//   0 0 10 0 0 10
//   0 0 10 10 10 0
//   8 6
//   5 1
//
// OUTPUT:
//   The area is singular.
//   The area is 25.0
//   Point belongs to the area.
//   Point does not belong to the area.
